Green Careers Mind Map

Instructions for Teachers & Task Leaders

Scene Setting
There are many different kinds of green jobs - from working outdoors with animals and plants, to studying science in a lab, to helping communities make decisions for the future.

Activity:
Asking the students to reflect on what they have learnt from todays session (and subsequent sessions throughout Green Careers Week), they can now create a mind map to show all the opportunities for jobs:

- To begin, students Write "Green Jobs for Nature" in a centre circle.
- Then add branches for jobs they already know. They can add notes to these - such as the school subjects that link to this role - using further branching
- You could ask them to add a star rating for how much each role interests them (one star no interest/5 stars you'd love to do the job)
- They can add to this mindmap as Green Careers Week progresses
- By the end, they'll have a picture of how many different careers help people, nature, and the planet.

Curriculum Links

- PSHE / Careers: Exploring different jobs and pathways.
- Geography: Human interaction with environments.
- Science: Understanding how science supports careers in nature.

Reflection
Which green career sounds most exciting to you so far, and why?

Green Jobs for Nature
